fetal alcohol syndrome: prevention diagnosis, treatment

A CLINICAL GUIDE FOR OBSTETRIC AND PEDIATRIC PROVIDERS

This CD ROM provides a comprehensive overview for physicians, nurses and other health caregivers working with families across the perinatal/pediatric continuum and includes separate obstetric and pediatric learning tracks. Presenting the most recent research from the Institute of Medicine and featuring a cross collaborative approach, this interactive CD-ROM:

- Provides an overview of FAS including historical perspectives and diagnostic signs.
- Details the prevalence and etiology of FAS and other disorders attributable to prenatal alcohol exposure.
- Demonstrates methods for identifying women and children at risk prenatally through adolescence.
- Offers criteria to use in making a diagnosis of FAS
- Suggests strategies for making treatment plans and referrals for mothers and children affected by fetal alcohol
- Presents the most current and complete list of FAS resources

This program was funded by a Small Business Innovative Research grant from the National Institute of Alcohol Abuse and Alcoholism.

HOW TO ORDER

This program is available for free 30-day preview. Simply select the preview option when placing your web order. Your credit card will not be charged unless you keep the program beyond the preview period. Purchase orders may be faxed to 617-864-7862 and must include all product information, including price, with the words "for 30-day preview" clearly indicated. Preview orders are shipped free-of-charge by UPS ground.

“FAS Prevention, Diagnosis, Treatment CD-ROM is a vital educational tool for physicians and nurses alike. It presents a clear overview of a very significant problem which is often overlooked in today’s busy primary care setting.”

Marilyn Augustyn, MD, Dept. of Developmental and Behavioral Pediatrics, Boston Medical Center

About Vida Health Communications

Since 1985, Vida Health Communications has been working to improve the health of women, children and families through the production and distribution of evidence-based educational media for clinical, patient and lay audiences. Working in partnership with federal health agencies, researchers and leading medical professional groups, Vida translates complex research into practical, media-based training using DVD, CD-ROM, Internet and linear video technologies.
